## HIGHLIGHTS

Fortinet UTP access points are designed to support a variety of deployments from branches, to medium to large offices, schools, universities, hospitals, hotels, and large retail stores. These access points can serve such a wide range of applications because they can be managed by any of Fortinet's control and management. By supporting UTP services at the edge, deployments have the flexibility to enable security services wherever they need them in their network.

## Education

The Education sector is at rising risk from cyber attacks. In conjunction with requirements to protect minors from inappropriate materials, this can make deploying wireless a challenge. Our integrated secure wireless controller (FortiGate) ensures secure student access to learning resources while FortiGuard services provides cybersecurity protection.

## HIGHLIGHTS

### Healthcare

Patient safety is priority one. Fortinet UTP APs empower hospitals to improve patient safety by enabling life-critical applications such as telemetry requiring low bandwidth but exceptionally high reliability. Our dedicated wireless controllers (integrated WLAN controller of any FortiGate security appliance) connected to our access points ensures patient safety remains paramount, while providing improved performance for wireless enabled medical devices.

### Small/Medium Business

Retailers can streamline Wi-Fi store deployments through the combination of UTP APs and FortiLAN Cloud management. This scenario, in combination with FortiDeploy for zero-touch provisioning and deployment, offers a cost-effective and secure solution for retail IT.
