For professional video editors and the most demanding home cinema installations, the **MediaLight Mk2 Flex** from **Flanders Scientific** creates a bias light that gently illuminates the area behind and around your monitor/television. This gentle

# FSI Solutions MediaLight Overview

*For professional video editors and the most demanding home cinema installations, the **MediaLight Mk2 Flex** from **Flanders Scientific** creates a bias light that gently illuminates the area behind and around your monitor/television. This gentle illumination provides your eyes with a consistent visual reference that improves your viewing experience.*

With a D65 rating (6500K), and a 98 CRI rating, the soft illumination helps prevent your brain/eye

combination from adjusting the image as you watch it, keeping the perceived contrast, color temperature, and brightness consistent over your viewing/editing session. The MediaLight Mk2 Flex is powered by an optional USB power supply and includes a remote control that allows you to adjust the brightness of the flex to the SMPTE standard of 5 cd/m<sup>2</sup> without the color temperature drifting.

The unit supports PWM dimming, for accurate color rendition throughout the range, without color shifts

This flexible source light wraps around your 21 to 32" monitor on four sides or your 25 to 46" monitor on three sides to create a bias light for improved viewing conditions.

Powers from USB 3.0 source (not included)
